INDEX TO VOLUME 67

July 2 to December 31, 1932

To facilitate reference this index to Volume 67 has been divided into three parts: an index to subjects, to companies, and to authors, arranged in the order named in the following pages. Thus the three common methods used in seeking any particular article have been segregated to avoid the confusion which their intermingling permits.

THE PYROMETER REGISTERED

800°

yet the lining was still in excellent condition

A temperature of 800° is obviously not encountered on many brake installations. Nevertheless, the fact that a Rusco Lining could withstand such operating conditions with no noticeable ill effects is striking evidence of its remarkable heat-resisting qualities.

Full details on the test in question are as follows: A truck loaded with a gross weight of 12,000 lbs. was allowed to free wheel for a distance of 1 mile on a 10% grade, being held to a speed of 12 M.P.H. by means of the emergency brake lever. Emergency brake was of the disc type mounted on propeller shaft, and brake linings consisted of two pieces, each containing 15 square inches.

During the 5½ minutes of the test, the pyrometer registered an operating temperature of 800°, the brake linings absorbed a total of 5,800,000 ft. lbs. of energy and the brake disc became red hot. Yet the linings, when removed, showed an average wear per piece of only .021 and were still in excellent condition.

Complete performance data on Rusco Linings for your brake will be furnished gladly upon request. Address Engineering Department C-6, The Russell Manufacturing Company, Middletown, Conn. Incorporated 1834.
